

# HERAE Provider Solution

## Paperless Payment Processing with DirectERA™

HERAE's **DirectERA™** for healthcare providers will easily automate many aspects of paper-based processes for posting, deposit verification, coordination of benefits, refunds and more with a more efficient, cost-conscious electronic version that is secure, HIPAA-compliant and requires no software or IT upgrades.

### Electronically Connect to Payers

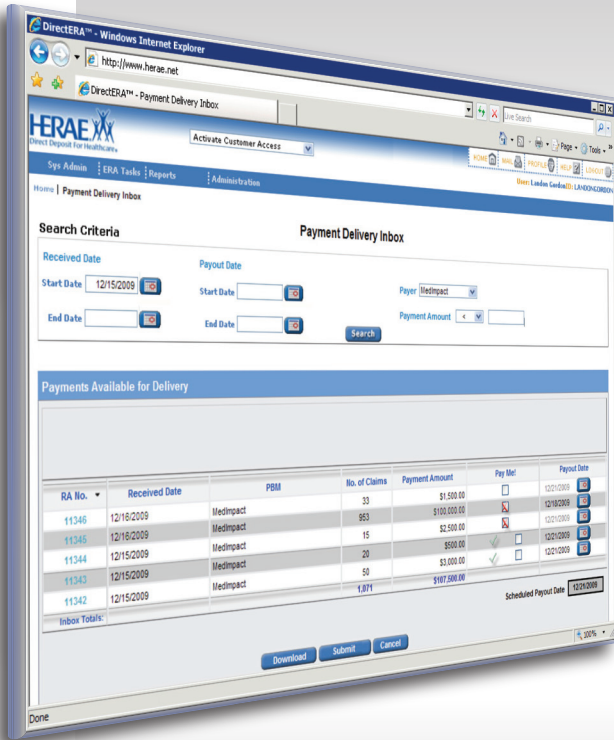

HERAE provides direct, electronic connections to many major U.S. Payers to deliver advanced payment solutions to providers quickly, inexpensively and with all the features to embrace electronic remittances. Providers can collect, manage, and reconcile ERA/EFT payment information from payers with a single electronic solution, eliminating administrative inefficiencies due to managing multiple processes.

### Automate Payment Re-association

**DirectERA** facilitates enhanced cash management and efficient payment timing with automatic reconciliation of remittances and payments - helping providers get better control of their payment delivery.

### View a Consolidated ERA Format

**DirectERA's** automated process retrieves ERA data and presents it in a single, electronic, humanly readable format regardless of the originating payer. This standardized format can then be downloaded into existing billing or accounts receivable software so you can work with claims and route them quickly, easily and accurately.

### Perform Advanced Business Analytics

HERAE provides a single, uniform data source to perform advanced business intelligence analytics (denials, exceptions, and payment trends) to help correlate paper-based and electronic sources of data.

### Enables Sub-accounting: reconciliation, processing & posting

HERAE has developed and implemented a first of its kind sub-accounting capability within its automated payment solution suite. Now payments between payers and providers are no longer constrained at the Tax Id Number or higher identifier. HERAE's unique database structure allows us to reconcile, process and post healthcare payments at various levels of an institutional hierarchy, including rendering provider ID, NPI, facility code, location or virtually any element that is included in the accompanying 835 transaction.

### HERAE: One of the Nation's Largest Electronic Healthcare Payment Service Providers

Since 2005, HERAE has provided complete end-to-end electronic provider solutions to improve the healthcare payment system. HERAE seamlessly and securely connects healthcare insurance payers, PBMs, pharmacies, healthcare providers, and financial institutions with standardized electronic transactions that eliminate paper, cut bank fees and lower administrative costs. HERAE's electronic remittance and EFT software-as-a-service is used by major payer organizations and PBMs, including Medicare and Medicaid, representing thousands of healthcare providers and pharmacies. HERAE is certified by EHNAC, Maryland Health Care Commission EHN, and SAS 70 (Type II).
